

DIGITAL CARRIER FOR DATA STORAGE, AND DEVICE FOR  
READING AND/OR READING/WRITING SAID CARRIER

ABSTRACT

The present invention concerns a digital carrier for data  
5 storage, which carrier has no through hole, is preferably made as a  
card conforming to ISO standard 7810 and has an optical surface  
that can be read/written in an optical disc reader/writer. Said  
carrier comprises, at the center of said annular surface, a body  
that can be magnetically attracted whereby at least one face of the  
10 carrier is obtained that is wholly available for printing processes.  
The invention further concerns a device for reading and/or  
reading/writing said digital carrier.
